Dear sirs,

The “Pashiyskiy metallurgical cement plant” OJSC was founded in 1785. Production of cast-iron grinding bodies was put into operation in 1942. Nowadays the plant is the biggest manufacturer of the cast-iron grinding bodies (cylpebs) in Commonwealth of Independent States (CIS): our plant produces and ships 30 000 tons of cylpebs annually.

At the present moment “Pashiyskiy metallurgical cement plant” OJSC produces grinding bodies – cylpebs 32 mm, 25 mm, 18 mm, 16 mm and 12 mm in diameter, from 47 till 57 HRC hard. Our cylpebs find industrial application at the last stages of ore degradation particularly in grinding mills like VERTIMILL (Metso).

Our cylpebs are used at such mining and processing works as Norilskiy Nikel, Kola Mining and Metallurgical Company, Ural Mining and Metallurgical Company (UMMC), KGHM Polska Miedz.

We are interested in organizing deliveries of our cylpebs to Mining and Metallurgical Companies.

For formation of the offer with the indication of the price of cylpebs, we request the technical characteristics of the grinding bodies demanded at the above specified enterprises.

Sincerely yours

General director

Mr. Kamenskikh A.A.

Mr.Denis Chikishev
