TO: THE LEADERSHIP

our ref. № A99/1115

Dear Sirs,

I am pleased to inform you that we are engaged in electric power technologies in the field of advanced electric energy generating machines and at present time we have foremost, in accordance with the physical tests and trials, patented results. So, we would like to offer you cooperation in the field of technological business and production of advanced energy electric power generators.

The advantages of cooperation are listed in our technical and economic documentation and some of them are high profitability, viability, novelty, environmental friendliness, low investment capacity and ease of organization of production of electric power generators of the brand new grade.

Implementation of the newest (patented *inventions* of 2011-2014 years) technical solutions in construction of electric power generators let us to get lightweight and very compact high power generators, which are much more productive, reliable and cheaper than present generating systems with more than significant markets. Application of new machines - where now are used any generators (any transport, automotive industry, shipbuilding, airspace, and, of course, electric power production, including wind and other clean alternative energies, construction, home appliances, hospitals, industrial plants, farms, ecological transport, special equipment and much, much more).

Information on the project and technology may also be provided by Tula State Government (RF central region), Tula state business-HUB (www.hub71.ru), Corporation on development of Tula Region (www.invest-tula.com), other State structures and nationwide business associations, KOTRA, EICC network, RF Trade Representation in your country.

This year present project is in the RF TOP 12 of the best new technology start-ups (among more than 2500 hi-tech projects) by decision of Agency on regional innovative development. You may see also publication in Expert union magazine of the Union of Russian machine builders (which President is the head of ROSTEC State Technological Corporation www.rostec.ru) <http://bit.ly/1OMO2Sy> about new generators: the maximum power output per mass unit in the world, that is, they produce per unit of its mass much more electric power output than any known analogues. The result is achieved without sacrificing other technical characteristics and without growth of cost of production. New generators: much simpler, much cheaper, much more reliable and much more efficient device. It is some kind of Kalashnikov among electric generators. Such projects can, as experience shows, attract significant investments: <http://bit.ly/1cKFqy1>.

Technology presentation and project brief summary in English you can find at <https://vk.com/projectdoc>. Thank you in advance for confirmation of the receipt of this letter. Person for contacts: Alexander AMONSKIY, company co-founder and managing partner, telephone +7 (953) 435 92 61, E: ENRD@BK.RU.

And I am pleased to draw your attention on news: we took part in the "Open innovation 2014" global Forum & Exhibition (www.forinnovations.ru) with the complicity of the Prime Ministers of the Governments of Russia and China by the special invitation of the Organizing Committee. This is substantial occurrence for us: we presented there one of very few ready-to-launch innovative-technological projects in field of Global Electric Power Tech. Thank you.

20.11.2015 year

Faithfully,
KARASEV J.V.
Co-founder of TEPT Jurgen LLC
