

Plywood Plant 'Vlast Truda' is one of the oldest wood-processing enterprises in Russia and the major supplier of low-combustible plywood for railway carriage manufacturing and building industry.

The plant works at the export market for more than forty years. The largest countries consuming its products are the following:

United States of America, Germany, Egypt, Turkey, Azerbaijan, Finland, Great Britain, Latvia, Estonia and Italy.

The plywood plant is the full-scale manufacturing complex dealing with wood-processing – from pretreatment of the round wood to the turnout of the end product.

The plant manufactures plywood that possesses all useful properties of wood but besides it is not subject to checking; it is protected from moisture; it can take various bending shapes and it has dimensions convenient for fast mounting/dismounting and transportation.

The plywood produced by our plant is much-in-demand in construction, mechanical engineering, railway carriage manufacturing, shipbuilding and furniture making.

The favourable geographic location of the plant (it is situated in close vicinity to the federal highway and railway station) allows solving the logistics issues.

We offer you active cooperation on mutually beneficial terms!
