

PRODUCT CATALOG  
**DISPOSABLE FACE MASKS  
OF RUSSIAN MANUFACTURE**

2020

# DISPOSABLE FACE MASKS OF RUSSIAN MANUFACTURE

## Disposable application

Synthetic non-woven fabrics used in production are specially designed for healthcare products.

## Output rate

The total production capacity of mask manufacturers in the Russian Federation is up to 10 million masks per day.

## Quality

Hypoallergenic materials with high air permeability which do not irritate facial skin are used in products. All product models are tested in laboratories.

## Delivery

Products are exported from international Russian airports, which ensures the shortest time of delivery or any other convenient way.

## Meltblown

All masks of Russian manufacture contain filtering material with the fiber spacing smaller than the size of most viruses and bacteria, including coronavirus.

## Packaging

Manufacturers offer various consumer packages which differ, among other things, in colors, materials and number of units.

## Sterility

Masks may be additionally sterilized to be used by healthcare providers.

## Color

Various color choices are available for the products – both single-color masks and masks with custom design (printing).

A line drawing of a person's face wearing a grey surgical-style face mask. The mask has a white nose clip at the top and two green elastic ear loops. A dashed blue line outlines a rectangular area on the front of the mask, representing the filter layer. Three callout lines with circular endpoints point from text labels to the nose clip, the filter layer, and the ear loop.

**Nose clips**

made from durable, flexible materials for tight fit

**Filter layer**

filtration level up to 99 %

**Elastic ear loops**

Made from elastic and soft material for additional comfort
