**SCIENCE AND TECHNOLOGY
FOR LIFE SAFETY**

With the outbreak of the coronavirus (COVID-19) in different parts of the world, we at Roshimzaschita believe that it is our responsibility to support hospitals and people who need safety PPE in facing this global challenge.

Roshimzaschita is one of the leaders of industrial and defense systems of Russia in the sphere of protection and life support of a person in extreme conditions. The Corporation carries out its activities in the field of creation and production of high-tech products designed to protect against damaging radioactive, chemical, biological and other hazardous factors in peacetime and wartime.

Roshimzaschita traces its history back to 1958. Today it is a platform for innovative development of 12 Russian enterprises that combines the efforts of the scientific complex of the country in the development and production of unique protective equipment for the Russian and foreign markets.

Tasks aimed at preserving human life and health are solved daily by employees of the Corporation in scientific laboratories and test centers, in design and technology bureaus and in production shops of enterprises. We cooperate with universities and the largest scientific organizations in Russia and abroad.

Science and technology for life safety - is our guiding principal!

Medical Products

Non-woven medical protective suit

Medical protective suit is made of non-woven fabric in compliance with TU 32.50.50-002-00286485-2020 and is intended for use as a barrier agent to prevent external human infection. These coveralls are designed to protect the user from dangerous substances, products and processes – from contamination by contact with people. Depending on the degree of chemical toxicity and exposure conditions, coveralls are usually used to protect against solid particles, sprayed liquids in a limited volume and sprayed liquids under high pressure.

The kit does not include gloves, respirator, mask, face shield and glasses. This configuration is formed on request. The price includes only a set of clothes.

Medical Products

Non-woven disposable protective suit

Disposable suits have many advantages: they are hypoallergenic, do not contain toxic substances, breathable, antibacterial, alkali-resistant and also repel water, general industrial pollution, dust, black carbon and many other smallest particles. Elastic bands on the cuffs of the sleeves and pants, and the hood can protect a person from getting foreign substances under the clothes. The unique structure of the material provides the suit with durability.

The kit does not include gloves, respirator, mask, face shield and glasses. This configuration is formed on request. The price includes only a set of clothes.
