

**Enterprise Solutions for
Information Security
of IRCOS JSC
(since 1992)**

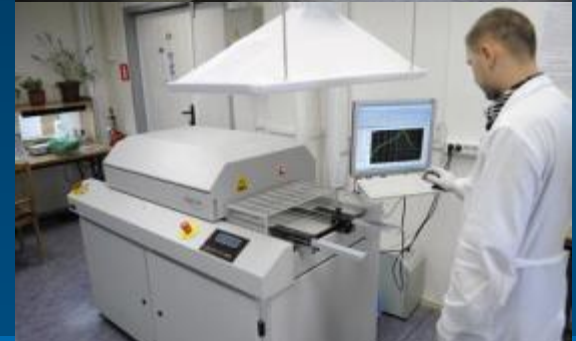

ИРКОС

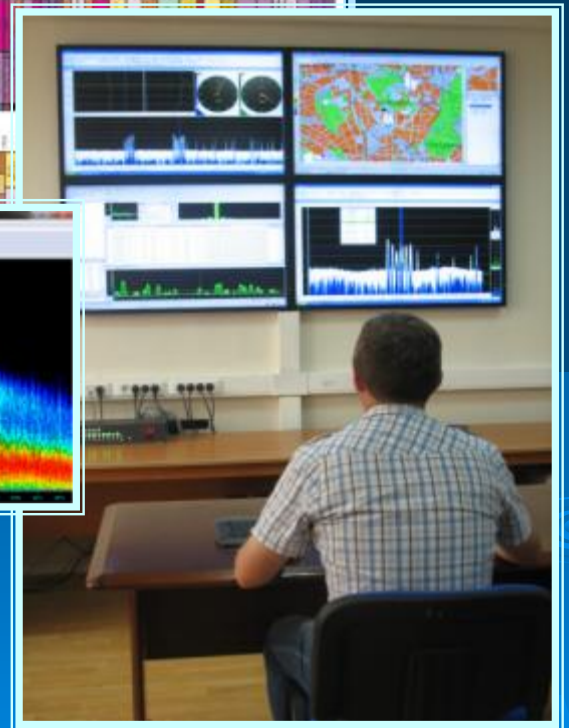

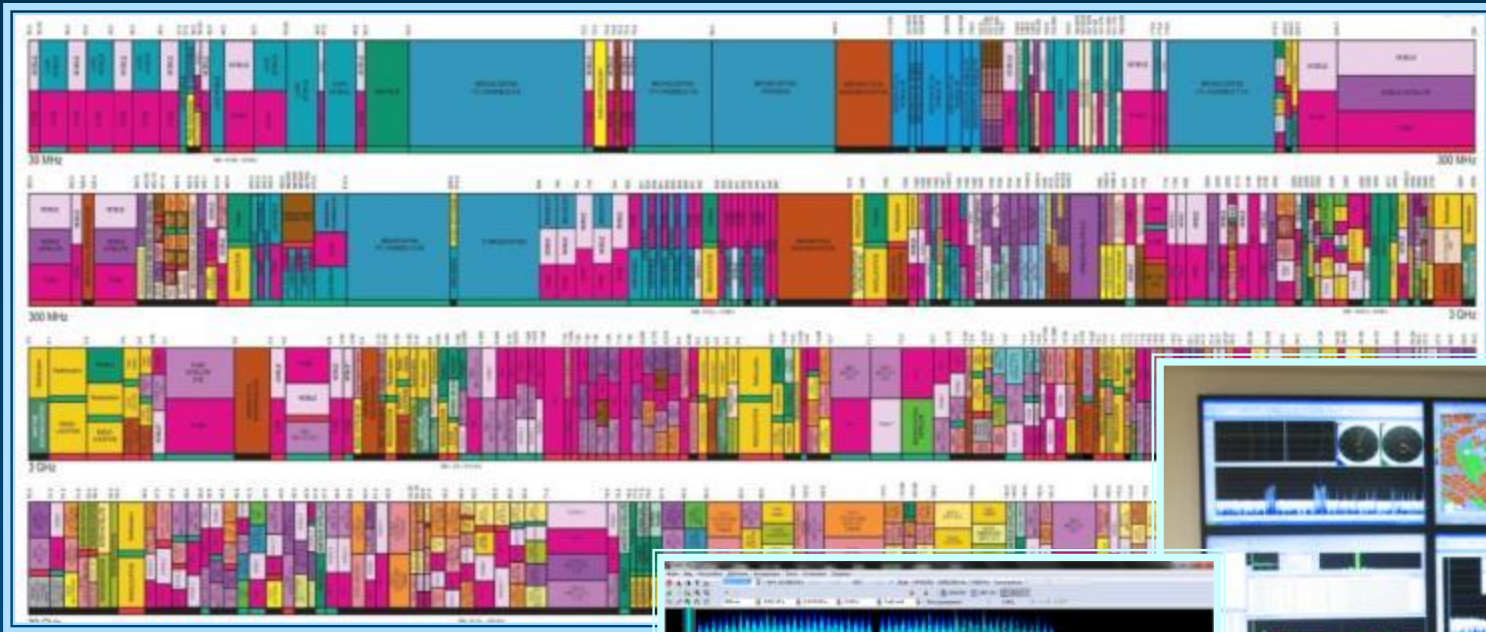

December, 2019

IRCOS JSC. Key Facts

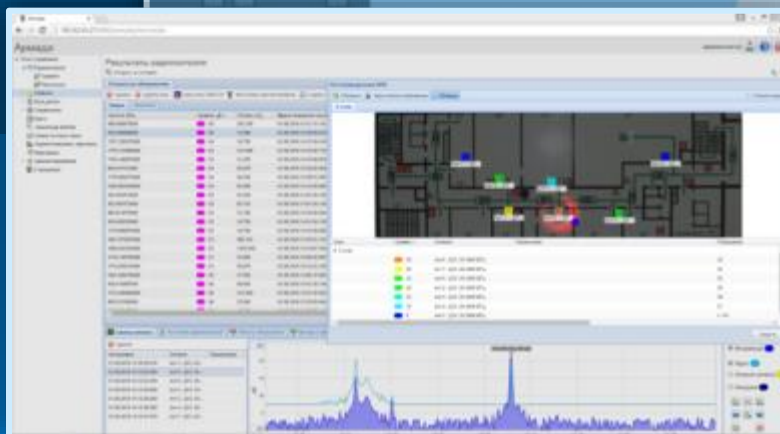

1. Established in 1992
2. 250+ of high-skilled employees
3. 3000+ square meter of production facilities
4. Engineering design and manufacturing of high technology products
5. Participation in work of ITU
6. Successful export activity since 2005

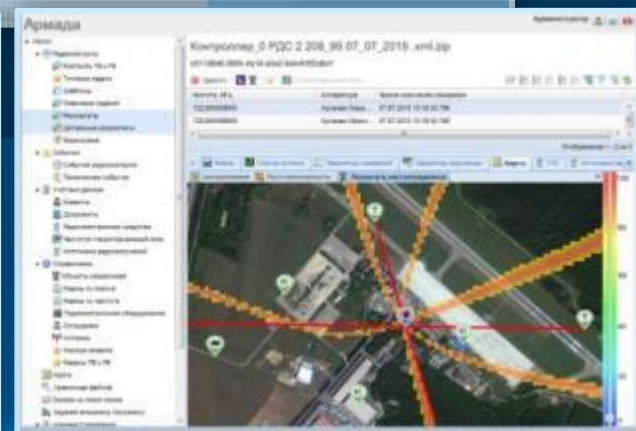

Spectrum Monitoring

Detection of Interference Sources

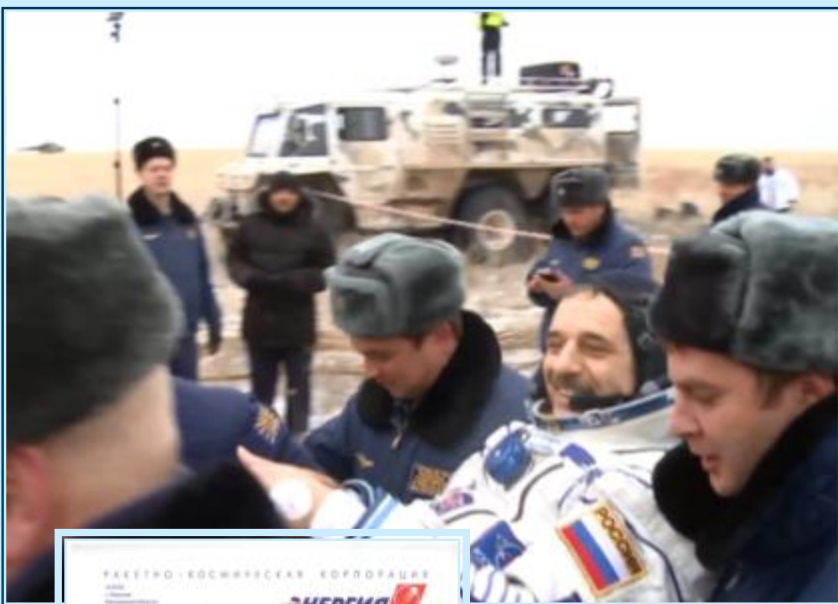

Localization of radio sources indoor

Localization of radio sources outdoor

Search and Rescue Operation

Enterprise Solutions for Information Security

Advances in information technologies pose new, increased requirements on the performance of security services for public and private companies, manufacturers, managing holding companies, network businesses, fuel and energy companies, and logistics centers.

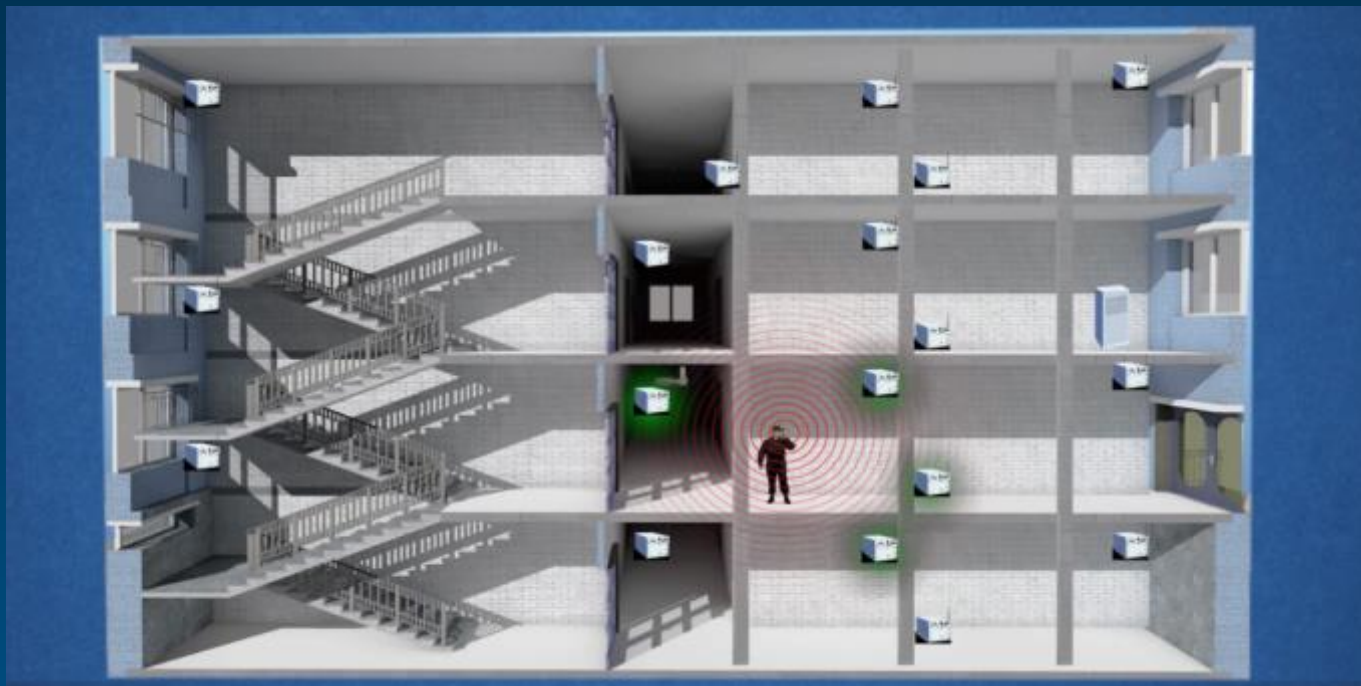

Today there are a lot of potential channels for information leakages: wireless communication devices (such as phones, smartphones, radio stations), devices with radio modules (such as tablets, laptops, gifts for upper management, video cameras, routers), as well as specialized devices for discreet audio surveillance (i.e. RF bugs).

All these devices can be used by malicious persons, competitors and dishonest employees to their advantage.

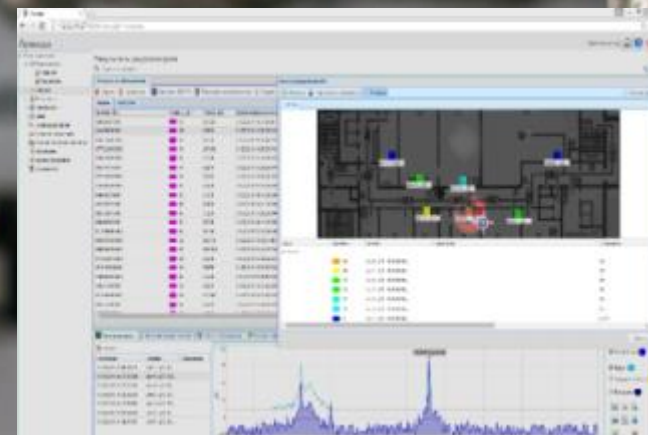

Examples of possible unauthorized channels of information leakage

ARC-D15R: System Solution for Information Security

ARC-D15R: Features & Advantages

1. Safety for personnel and customer's data
2. Absence of self-emissions
3. Unlimited scalability
4. Round-clock operation
5. Wide variety of detected emissions
6. High performance
7. Low probability of false alarm
8. Sophisticated tool for analysis of detected emissions
