

TRIBOGREEN™

PREVENTIVE oil ADDITIVE

EPILAM «TRIBOGREEN»

Maintenance of working
characteristics

Wear protection

Increased service life

Nano-containing triboadditive - antifriction additive to motor and transmission oils. Multifunctional polymer concentrate is designed to protect against wear and maintain the performance of engines and transmissions of cars and trucks.

Specification

Свойства	Метод	Единицы	Значение
The maximum load on bullies	GOSNITI method	Nm	140
Chemical resistance	9403-80	Method A	Endures
Density at 20 ° C (average)	3900	kg/м ³	08-1,3
Sulphate ash (on average)	12417	%	0,051
Flash point in open crucible	4333	°C	More then 100
Pour point	20287	°C	Below minus 48
Alkaline number	11362	Mr	Less then 0,05

It is applied by the method of addition to the oil, followed by stirring (agitation). Consumption: 1-3% of the working volume of oil. The recommended temperature of entering into the oil, within: +16 ° C ... + 110 ° C in a warm engine. Immediately after adding the composition, drive the car for 20-25 minutes in normal operation. After the procedure, the car can be used as usual.

RECOMMENDATIONS: Not recommended to add to oils, lubricants or aggregates containing metal particles, ceramic particles, geomodifikatori friction or additives with their content (aluminum, magnesium, iron, zinc, nickel, graphite, molybdenum, tungsten, serpentinite, etc.)

Benefits

- Interferes with formation of deposits
- Does not harm catalytic converters
- Resource increase
- Protection under increased loads
- Easy engine start and “cold start” protection
- Fuel economy
- Vibration and noise reduction
- Improved extreme pressure properties / elimination of dry (oil free) friction
- No chemical effect on the rubber goods, plastics, composites (gaskets, seals, etc.)

Certificates

- TY 2412-002-13868195-2012;
- Certificate of conformity (Наносертифика)
- Security Pass
- ISO certificate
