solutions

Key market - agricultural organizations and farmers

We work with farmers who grow vegetables, fruits and berries, forage and cereals

Drip irrigation

Once upon a time...

In the early 1930s.
Simcha Blass.
The idea of drip irrigation.

In the early 1930s, a farmer drew his attention to a big tree, growing in his backyard "without water". After digging below the apparently dry surface, Simcha Blass discovered why: water from a leaking coupling was causing a small wet area on the surface, while an expanding onion-shaped area of underground water was reaching the roots of this particular tree—and not the others. This sight of tiny drops penetrating the soil causing the growth of a giant tree provided the catalyst for Blass's invention. The drip irrigation concept was born and experiments that followed led Blass to create an irrigation device that used friction and water pressure loss to leak drops of water at regular intervals. Recognizing the high potential of his discovery, he began to look for ways to turn his idea into a product.

Drip irrigation advantages

More productivity

Shorter time of vegetation

Economy water and energy

Row spacing is dry

We the biggest factory in Russia

More than 1,5 millions meters
of drip tube per day

Factory works 24/7

ISO 9001:2008
ISO 9261

3 stage quality control

Drip irrigation tube market in Russia

Import and internal production

Drip irrigation tube market in Russia

Import and internal production

2018

We are the leader of Russian market

Countries where Neo-Drip is working now

14%

of produced at 2018
Now working in countries

Kazakhstan

Armenia

Kyrzyzstan

Belarus

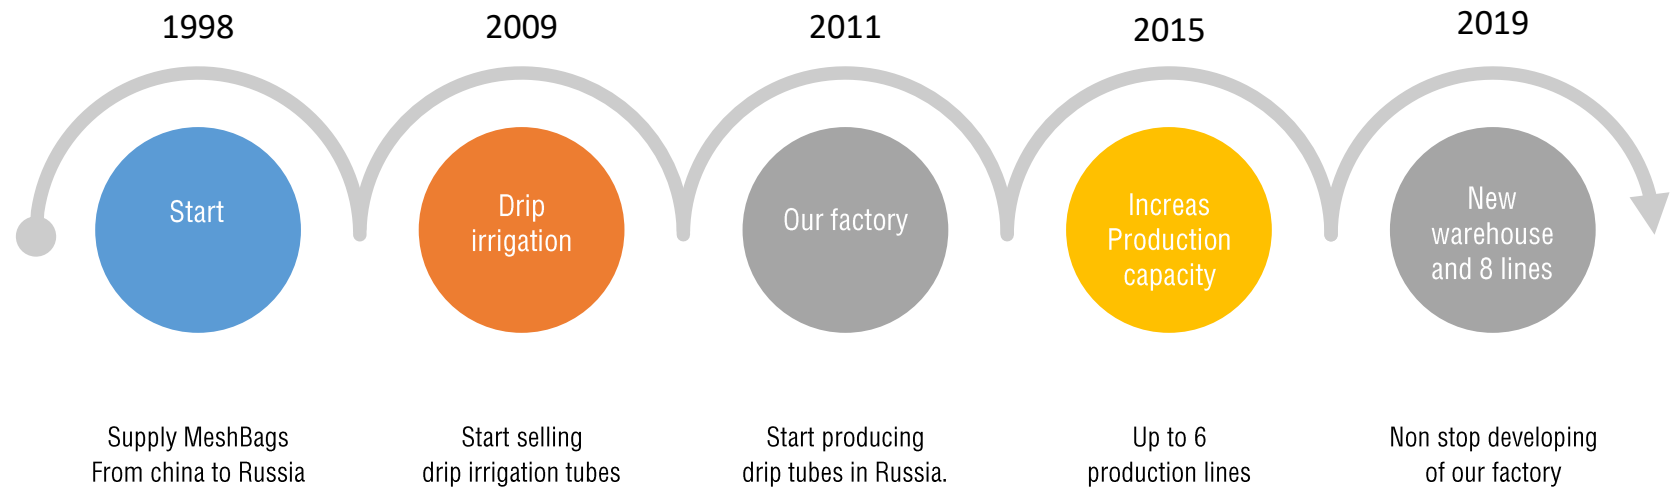

Uzbekistan

Ukrain

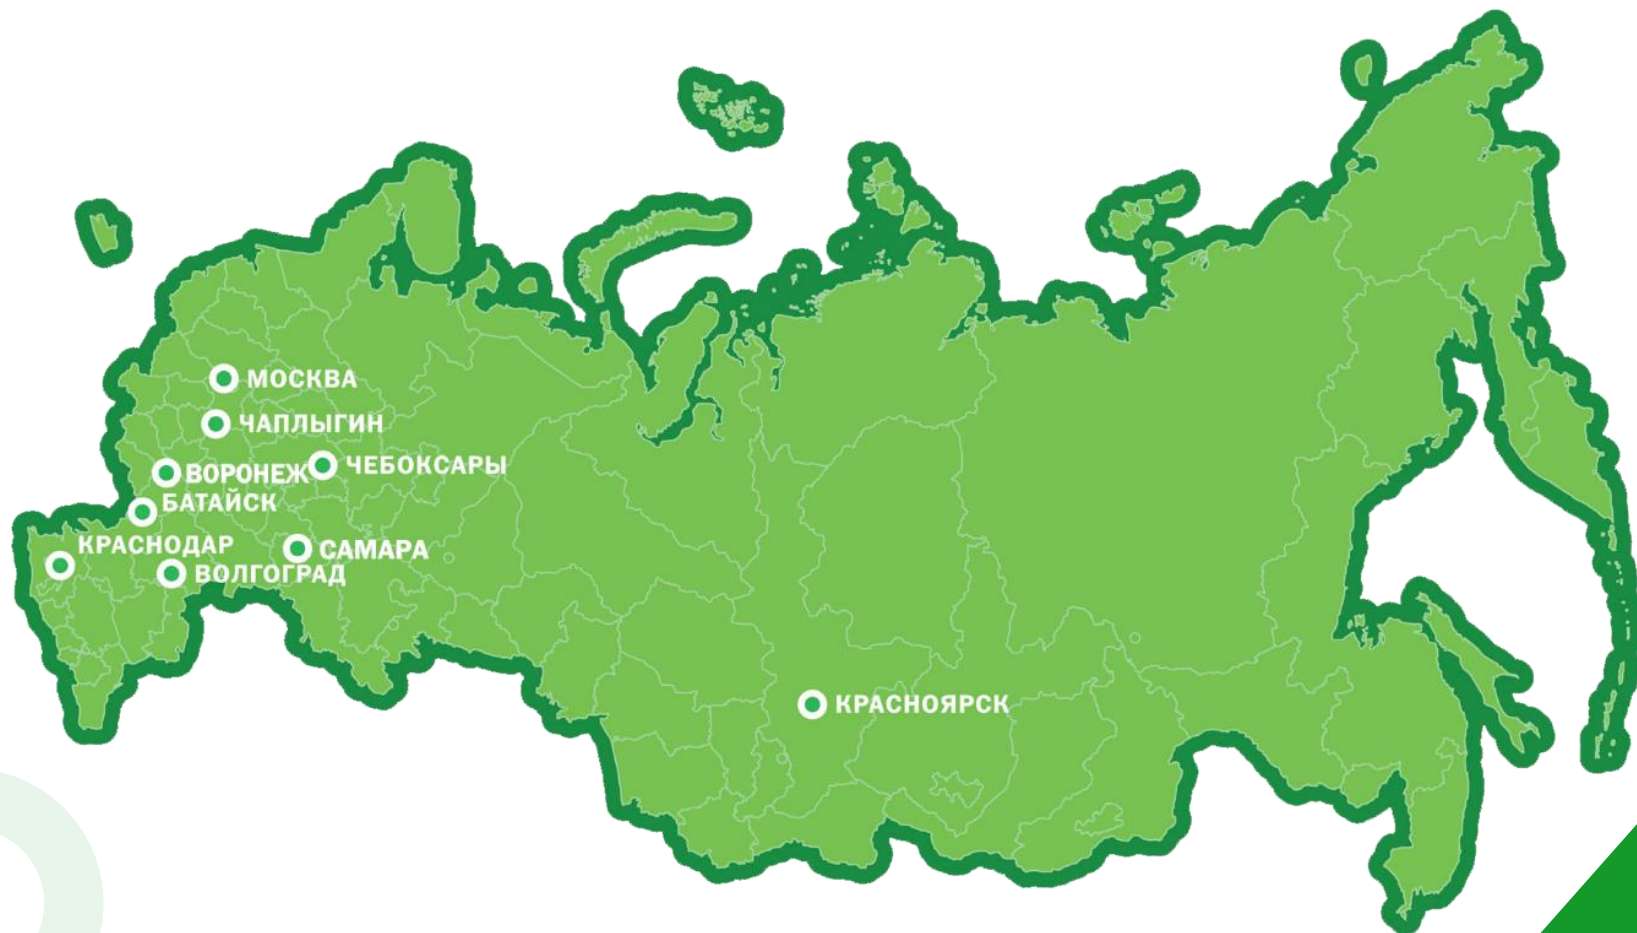

Company history

Step by step to goal

We have our trade offices in Russia

Than closer to client, better understand needs.

Thank you for your attention
