

## Interactive anatomical complex

### «PIROGOV»

«Razvitie» LLC is glad to represent interactive anatomical complex «Pirogov». This complex includes the sensor table and the range of licenses with anatomical 3D-atlases specifically tailored for the study of anatomy at universities and medical schools.

Interactive anatomical table «Pirogov» has been successfully implemented within the medical universities and medical schools. It is currently widely used in Russia, Kazakhstan, Armenia with the plan to take the product global by 2021.

We currently have over 100 tables throughout the various medical universities installed and being effectively used, we are also planning to deliver tables «Pirogov» to Vietnam and Luxembourg in the near future.

Interactive anatomical table «Pirogov» and various versions of our product for PC, are based on unique Russian software, specifically designed for medicine. You can analyze human body through the systems or study each organ of the body individually.

3D-atlas «Pirogov» anatomy provides you with the access to the full cycle of profound knowledge of digital dissection, 3D-model of the body, and testing systems, that can be further used for students.

---

Interactive anatomical table «Pirogov» is a highly effective product for the educational systems in different countries. This unique Russian product insures the best possible outcome when designing the anatomy courses based on the top medical studies.

### **Who are our clients?**

1. Medical universities;
2. Medical schools and faculties;
3. Medical colleges.

### **Why our product is beneficial for the market?**

Our product is adaptable and customized for each local market, including translation to another languages. This is the equipment specifically designed for education with the following benefits:

1. Licensing and certification are not required.
2. The prices are highly competitive on the market.

When delivering our package, we provide full licensing and ongoing on-line support: including on-line and face-to-face consultation with our clients, distributors.

We are committed to support and provide back-up service and organize demonstrations as required.

### **We will be glad to discuss the various levels of partnership available, such as:**

1. Distribution companies with the high level of expertise in sales of similar equipment in the local market;
2. Medical universities who can consider assessing our product and creating legislation documents for the local market, based on the requirements of the medical education system of a country.
3. Teachers and tutors performing anatomy courses in universities. It's very important and useful to know their opinion and recommendation for adaptation and developing of our product.
